	Elementary Space	Intermediate Space	Overall Space
Elementary Time	How many cases did Cuyahoga County have on March 16, 2020?	Which counties had more than 10 cases on March 24, 2020?	What county had the most cases on March 31, 2020?
Intermediate Time	How many cases did Cuyahoga County have during June, 2020?	What counties averaged over 50 cases a day during June, 2020?	What county had the most average cases per day during June, 2020?
Overall Time	How many total cases did Cuyahoga County have?	What counties averaged over 25 cases a day during the entire collection period?	What county totaled the most cases during the entire collection period?

The visualization I designed draws each of the counties in Ohio, and on hovering over a certain county, the name and total cases reported in the county over the course of data collection are printed out. This does not address some of the questions in the intermediate and overall levels that involve averages and ranking, but this is effective because some true information is lost when reporting those summary statistics. This responsive visualization clearly tells users exactly what they want to know, the total number of cases reported in their selected county, with no possibility to misconstrue the information or its meaning.
